

SF2004 - “Man Counting System” & Application

SYSTEM SCHEMATIC :

Applications -

- Confined Space
- Warehouse
- Scaffolding

SYSTEM DESCRIPTION :

- As per Schematic, we are using this scheme as Man Counting application with Safety Mat, PLC with HMI, GPRS Modem & Safety Relay.
- In this scheme, we are using two Safety Mats, Each Safety Mat will be connected to Safety Relay which will monitor the operation of Safety Mat.
- The Output of these Relays will be further connected to PLC with inbuilt HMI.
- This PLC will have counter also, which will count the person standing or passing through mat.
- When any one step on first Safety Mat, it will count in increasing order and when step on second Safety Mat first, it will count in decreasing form.
- Total no of persons who have passed through both safety Mat will be calculated as difference of both counters & this count will also displayed on HMI screen.

Continue...

- We can specify a maximum number in PLC, when the count is more then that specify number, PLC will generate an alarm output.
- We have consider a Flasher Siren which will connect with that PLC output.
- We have consider a over load lamp over panel, it will also glow when that O/P is high.
- Apart from this we have also considered Test Push Button, Reset PB & Acknowledge PB.
- In this solution, SMS facility is also there, when the number of persons is more then the specify in PLC, a predefined SMS will be sent to pre specify numbers that count is high.
